

DUAL LAMINATES

Have joined the *Electro Chemical* family of services!

In our ongoing quest to deliver outstanding corrosion protection, *Electro Chemical* is expanding the breadth of service we can provide you. In addition to top-notch solutions to protect your steel tanks and equipment, we now provide liner solutions for all your FRP tanks and piping.

To do it right, we've partnered with Guyle McCuaig and team. With 35+ years leading top dual laminate companies in the world, Guyle is the best person possible to create outstanding FRP solutions to protect your tanks and equipment.

Together, we've created a partnership titled –

Superior Dual Laminates, Inc.

When working with *Superior Dual Laminates*, you'll have access to the legendary innovation, care, and collective wisdom of both the *Electro Chemical* and McCuaig teams.

What This Means for You . . .

A COMPLETE, TURN-KEY SOLUTION

Under one banner, you'll have access to Engineering, Fabrication, Installation, QC, & Commissioning teams – for both steel and FRP tanks, piping and equipment requiring liner protection!

This unified A-Z capacity eliminates you having to coordinate multiple vendors to accomplish your project. Just one call gets you answers to any questions during any phase of the operation. And when it's time to scale up your installation or perform maintenance, one team can handle it all.

Think of the time you'll save and the coordination hassles you'll avoid.

UNBIASED SOLUTIONS TAILORED to YOUR EQUIPMENT NEEDS

With the inclusion of dual laminates, *Electro Chemical* can pick whatever lining best suits your processing, storage, and product transfer requirements. Firms without our range of thermoplastic and fluoropolymer linings are limited in what they can offer.

At *Electro Chemical*, we're not restricted in the liner materials we can offer and deliver.

**At *Electro Chemical & Superior Dual Laminates*,
Our clients' performance and success drives *EVERY* decision we make.**

EASY-TO-MANAGE MAINTENANCE

Electro Chemical's "One-stop Advantage" continues after installation is complete.

Whenever you have a question or need troubleshooting, you only have one number to call – for ANY question or concern. And just one warranty to track. Keeping straight of “*who's responsible for what*” is no longer a problem.

You can rely on Electro Chemical to keep your operations running smoothly.

FIELD and SHOP SERVICE AVAILABLE

We LOVE to work on-site! Our technicians are fully certified to create and install liner solutions for both fiberglass and steel tanks, piping, and equipment at your facility, not just in our shop.

Not all companies will work in the field. This limits what they can do for you. And it can throw a monkey wrench into your project plans.

With our field-ready team, your project continues without interruption and according to your plan.

TO TAP INTO DUAL LAMINATES at ELECTRO CHEMICAL
